

ABSTRACT OF THE DISCLOSURE

An animal control device directs a pressure pulse wave to an animal as a negative stimulus to deter undesired behavior. The animal control device includes a collar worn by an animal with a pressure pulse generator probe in contact with the animal's skin. The pressure pulse wave applied may be adjustable commensurate with the severity of undesired behavior. In 5 one embodiment, the animal control device contains a remote transmitter for a trainer to administer a pressure pulse manually and at a desired intensity. In an alternate embodiment, the animal control device may contain a bark sensor to administer a pressure pulse when the animal produces undesirable barking. Alternatively, the animal control device may contain a sensor for directing a pressure pulse if an animal strays from a desired confined location.
